

MDC PRECUT DOCTOR BLADES

PRE-MEASURED. SAFER HANDLING. CONSISTENT PERFORMANCE.

Precut, perforated steel doctor blades designed to eliminate manual cutting, improve safety, and streamline pressroom workflows.

MDC PreCut is a precision-engineered solution that simplifies doctor blade handling without changing how operators work. Using laser perforation, each blade is pre-measured to your specified length and delivered in roll format. Operators simply snap the blade to length at the press, eliminating manual cutting and reducing risk.

KEY BENEFITS

No manual
cutting required

Improved
operator safety

Consistent
blade lengths
every time

Faster
blade changes

Same handling
as standard
roll blades

SPECIFICATIONS

Available Widths

0.75" – 2.375"

Available Thicknesses

0.006" | 0.008" | 0.010" | 0.012"

Available Lengths

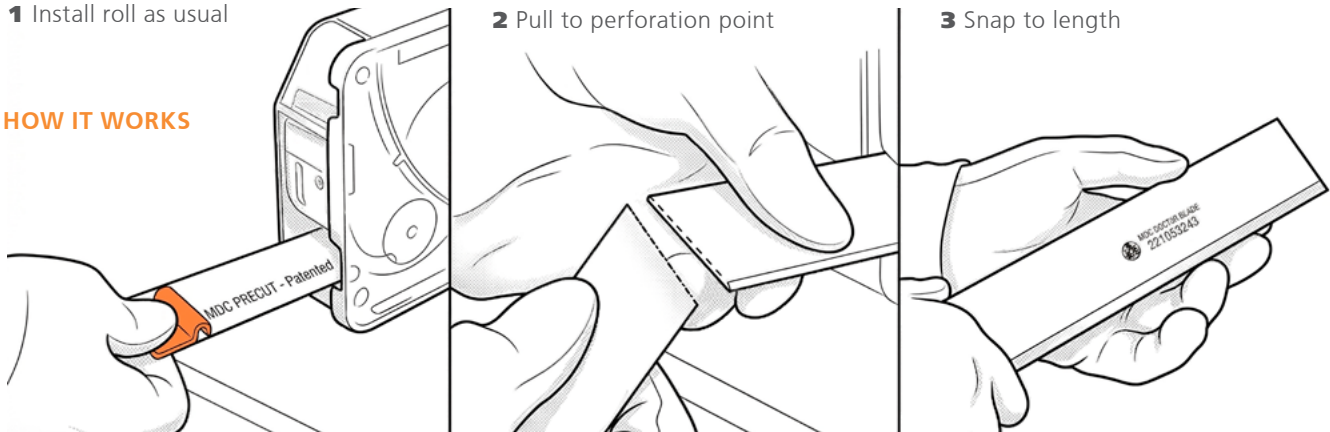

From 12"+ (customized to press requirements)

1 Install roll as usual

2 Pull to perforation point

3 Snap to length

HOW IT WORKS

MDC PreCut brings precision, safety, and efficiency together—helping pressrooms reduce variability while improving operator confidence and consistency.

IMPORTANT NOTES

Available for steel doctor blades only. Not available for plastic blades. Not currently available for foam-tape-backed blades.
