

THE EXPERTS IN INK TRANSFER TECHNOLOGIES

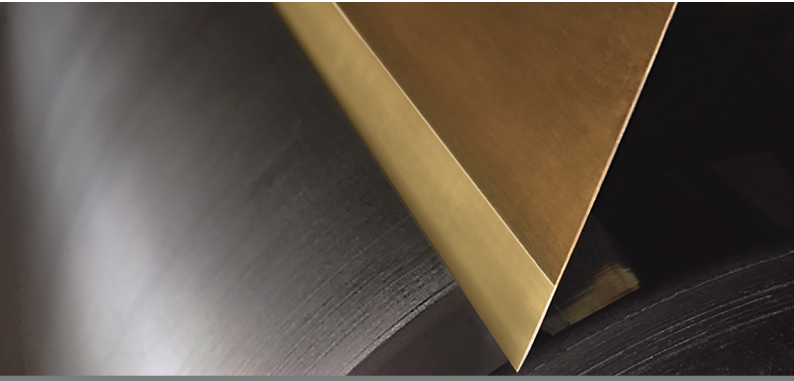

DOCTOR BLADES FOR
SHORT-RUN GRAVURE PRINTING.

Daetwyler

EVERY DAY USE AND SPECIAL APPLICATIONS.

COMMON CHALLENGES

- » Short, challenging runs that require excellent print performance with minimal print waste
- » Changing out high priced blades on every run can quickly become cost prohibitive and leaving them in for multiple runs while worn can be a big safety hazard
- » Low-cost blades often need too much set-up and adjustment for all-but the most experienced pressmen
- » Downtime can quickly make the cost of short-run jobs less profitable
- » Consumers demand smooth vignettes and strong colors

SMART SOLUTIONS

 **MDC RotoStar** A strong, multi-purpose coated blade that has the flexibility and durability to address the majority of all gravure printing jobs. RotoStar is also one of the lowest-cost coated blades on the market that can still be considered high-performance in terms of high quality output.

 **MDC GamutStar** Works well to minimize haze while helping to maintain the finest dot structure used in Vignettes. A good blade for balancing the graphics of strong solid colors and fine process printing. An upgraded coated blade for gravure applications.

 **MDC Gold** Our premium value coated blade which allows for precise ink metering and the absolute cleanest, possible wipe for the most stubborn haze. Perfect performance at all contact angles with no start up time necessary thanks to advanced lamella profile.

When it comes to smaller print jobs, adjusting the press for each run can be a costly, ineffective use of time or resources. Coated blades allow skilled and inexperienced pressmen alike to save time without sacrificing print quality, but they're simply too expensive to throw away after such short print runs.

Fortunately, Daetwyler has developed solutions that handle challenging graphics, easy set-up, and a smart balance of value and performance.
