

Equipment Service

Servicing your company's capital equipment is necessary to insure the lifetime of the equipment. During a preventative maintenance service, all of the following points are examined:

Distillation units

- Operation Parameters/Settings
- Operation Performance
- Automation
- Machine Components
- Complete heating system
- Vacuum System
- Nitrocellulose Control
- Pumps
- Cooling System
- Exhaust System

Parts Washers

- Pumps
- Electrical Controls
- Pipe Work
- Grounding/Bonding
- Nozzles
- Brushes (if applicable)
- Wash Bars
- Exhaust System
- Floats

Each segment is broken down adding up to a 100+ point inspection and service. Having a qualified service technician perform preventative maintenance will ensure the machine is working efficiently and safely which will extend the lifetime of the machine.

Contact Shawn Tiikkala at 704-875-1200, ex. 1311 or e-mail: cleaningtech@daetwyler.com to purchase parts and schedule maintenance.
