

OPTIPRO PLUS.

EXCEPTIONAL DURABILITY IN VARIOUS APPLICATIONS

The **OptiPro Plus** is a wiping blade for medium to high line screen process or line work. With medium flex strength and a thinner tip, this blade provides a clean wipe for printing process colors on higher line screen anilox rollers.

The OptiPro Plus contains a special polymer to lower friction reducing both blade and anilox wear. This special polymer, coupled with our proprietary tip machining process, provides a sharp, consistent tip.

This blade has good abrasion resistance, which makes it also ideal for use as a containment blade in chambered systems. The markets using this OptiPro Plus include flexible packaging, labels, folding carton, envelope and some coating applications.

The OptiPro Plus is an acetal-based blade with a built in lubricant. This doctor blade will work for all inks. The most common thickness used is 0.75 mm (.025"), in a 15 degree bevel, thin lamella or straight tip configurations.

Blade Thickness	Blade Width
0.635 - 0.890mm (0.025" - 0.035")	12.7 - 50.8mm (0.50" - 2.00")
